Changing Landscapes: An Immersive Journey

Explore heritage sites facing unprecedented challenges in a changing climate.

Perception Playground

The science (and the fun!) behind the brain's seemingly endless ability to turn reality on its head.

How does it work?

Using our turnkey immersive infrastructure, your institution gains access to two distinct experiences for one rental fee. Our model lowers shipping and installation costs, minimizes the downtime between exhibitions, and results in less gallery closure time during peak seasons.

We travel all the truss, walls, custom lighting, AV equipment, and exhibit components to install these experiences. The exhibits use the same basic wall, truss, and AV system, and transform through digital features, interactives, components, and graphic treatments.

Both exhibits arrive in a single, consolidated shipment. The second exhibition requires only an additional 500 ft² of storage for the changeover components in the exhibit package (1500 ft² total for empty crates and components for both exhibitions). Initial installation is 2.5 weeks, and the changeover installation is 5 days. Museum of Science technicians oversee both installations and the deinstallation. The rental fee includes travel expenses for Museum of Science technicians and comprehensive marketing packages for both exhibitions.

At a glance

Minimum rental period 6 months

6500 sq ft (flexible footprint)

Bilingual English/Spanish

Estimated 6-7 trucks combined for both exhibits

Host venue responsible for one-way inbound shipping

1500 sq ft of storage required for empty carts and components for second installation

Initial installation: 2.5 weeks

Second installation: 5 days
